CP06 DIGITAL LIFE & TECHNOLOGY EXPLAINED

Data Privacy Checklist

10 Setting Yang Patut Korang Semak Hari Ini

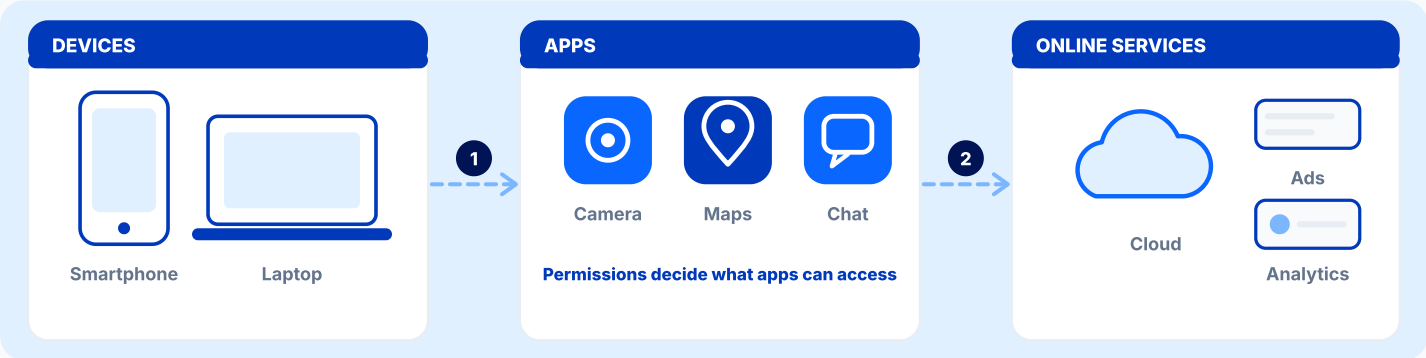

Take control of what your apps, devices and online accounts can access and share.

Setiap app, device dan akaun online mengumpul, menyimpan atau berkongsi data tertentu. Privacy settings membantu kita memilih apa yang dikongsi, dengan siapa dan untuk tujuan apa.

Privacy bukan tentang menyembunyikan semuanya. Ia tentang membuat keputusan yang tahu apa yang kita kongsi.

How Your Data Moves

Data bergerak antara device, app dan online services.

CHECKLIST PROGRESS **0/10 REVIEWED**

Cara Guna Checklist Ini

1 Understand
Faham apa yang setting itu kawal.

2 Check
Lihat keadaan semasa setting.

3 Act
Ubah jika tidak sesuai dengan keperluan.

4 Mark
Tandakan item sebagai reviewed.

SETTING DAN PILIHAN

Setting dan pilihan yang tersedia mungkin berbeza mengikut device, app dan platform. Checklist ini memberi panduan umum dan bukan arahan menu khusus. Cari kategori seperti Settings, Privacy, Security, Permissions, Account, Connected Apps, Advertising Preferences atau Data & Privacy.

PRIVACY VS SECURITY

Privacy berkaitan apa yang dikongsi dan siapa boleh melihatnya. **Security** pula melindungi akaun dan peranti daripada akses tanpa kebenaran. Keduanya saling berkait, jadi setiap item ditanda sebagai Privacy atau Security.

Device & Location Privacy | Checklist 01 hingga 02

01 1. Semak App Permissions PRIVACY

☐ Reviewed

WHAT TO CHECK

- Camera access.
- Microphone access.
- Location access.
- Contacts access.
- Photos and files access.
- Calendar access.
- Nearby devices or Bluetooth permissions where applicable.

ACTIONS

- **Review permissions for installed applications.**
- **Ask whether each app genuinely needs the permission.**
- **Change unnecessary permissions to a more restrictive option.**
- **Remove permissions from apps that no longer need them.**
- **Uninstall applications that are no longer used or trusted.**

EXAMPLE

A calculator app generally does not need continuous access to your contacts or microphone.

IMPORTANT

Some applications legitimately require specific permissions to function. Removing permissions may affect certain features.

WHY IT MATTERS

Permissions determine what information or device capabilities an application can access.

02 2. Review Location Access PRIVACY

☐ Reviewed

WHAT TO CHECK

- Which applications can access location?
- Is access set to always, while using the app, or only when requested?
- Does the application need precise location?
- Are location-sharing features active?
- Are there location histories or location-sharing services enabled?

ACTIONS

- **Restrict location access where continuous access is unnecessary.**
- **Prefer "While Using the App" when suitable.**
- **Disable precise location if approximate location is sufficient and the platform provides that option.**
- **Review location-sharing features with friends or family.**
- **Check location history controls where available.**

EXAMPLE

A weather application may only need approximate location for local forecasts, depending on how it works.

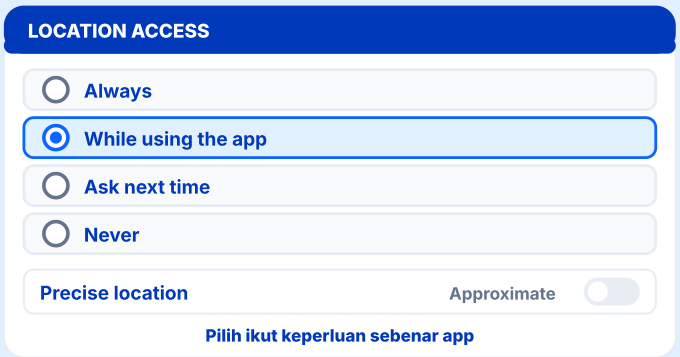

IMPORTANT

Disabling location permission does not guarantee that no location-related information can be inferred or collected through other signals.

WHY IT MATTERS

Location information can reveal routines, frequently visited places and movement patterns.

Advertising & Account Privacy | Checklist 03 hingga 05

03 3. Review Ad Personalisation PRIVACY

☐ Reviewed

WHAT TO CHECK

- Personalised advertising preferences.
- Advertising topics or interests.
- Activity-based ad settings.
- Data used for advertising where controls are provided.
- Cross-app or cross-site advertising preferences where available.

ACTIONS

- **Review advertising privacy controls in your accounts.**
- **Turn off optional personalisation where preferred.**
- **Remove or reset advertising interests if supported.**
- **Review relevant privacy choices periodically.**

IMPORTANT

Turning off personalised advertising does not necessarily mean advertisements disappear. It may reduce the use of certain data for personalised ads, but other forms of advertising and measurement may still exist.

WHY IT MATTERS

Advertising systems may use activity, interests and other signals to personalise the advertisements shown.

04 4. Secure Account Recovery SECURITY PRIVACY

☐ Reviewed

WHAT TO CHECK

- Recovery email.
- Recovery phone number.
- Backup codes.
- Trusted devices.
- Alternative authentication methods.
- Whether old or inaccessible recovery details are still linked.

ACTIONS

- **Make sure recovery email and phone numbers are current.**
- **Remove recovery options you no longer control.**
- **Secure your recovery email with a unique password and MFA.**
- **Store backup codes in a secure location.**
- **Review trusted devices and recovery methods periodically.**

IMPORTANT

Account recovery is a security and privacy concern because someone who controls recovery channels may potentially regain access to an account.

WHY IT MATTERS

A secure account is only as reliable as its recovery process.

05 5. Check Your Public Profile PRIVACY

☐ Reviewed

WHAT TO CHECK

- Profile visibility.
- Public posts and uploaded content.
- Phone number visibility.
- Email address visibility.
- Birthday and personal information.
- Followers and contact discovery settings.
- Activity status or online status.
- Search engine visibility where supported.

ACTIONS

- **Review what strangers can see.**
- **Hide personal details that do not need to be public.**
- **Restrict profile visibility where appropriate.**
- **Review old public posts and profile information.**
- **Check whether people can find your account through your phone number or email.**

IMPORTANT

Private profile settings do not necessarily hide all information. Profile names, usernames, profile photos and some public interactions may remain visible depending on the platform.

WHY IT MATTERS

Information shared publicly can be copied, saved, indexed or redistributed.

Connected Services & Browser Privacy | Checklist 06 hingga 07

06 6. Review Connected Apps

PRIVACY SECURITY

☐ Reviewed

WHAT TO CHECK

- Apps connected through Google, Apple, Microsoft or other accounts.
- Third-party services with account access.
- OAuth permissions.
- Services that can read or modify certain account data.
- Old integrations that are no longer used.

ACTIONS

- **Open account security or connected-app settings.**
- **Review applications and services with access.**
- **Remove integrations you no longer recognise or use.**
- **Check permissions before authorising a new application.**
- **Avoid granting unnecessary access.**

EXAMPLE

An application connected to an account may request access to basic profile information, contacts, files or other supported data.

IMPORTANT

Revoking access does not necessarily delete data already copied or stored by the third-party service.

WHY IT MATTERS

Connected applications can have access to information beyond what users expect.

07 7. Review Browser Privacy Settings

PRIVACY

☐ Reviewed

WHAT TO CHECK

- Third-party cookie controls.
- Tracking protection.
- Site permissions.
- Saved passwords.
- Autofill information.
- Browsing history.
- Download history.
- Website notification permissions.

ACTIONS

- **Review tracking protection and cookie settings.**
- **Remove permissions for websites you no longer trust.**
- **Check saved passwords and use a trusted password manager where appropriate.**
- **Remove unnecessary website notification permissions.**
- **Review browser autofill information.**
- **Clear browsing data when appropriate.**

Cookies
Data stored by websites or services in the browser.

Cache
Temporary copies of website resources.

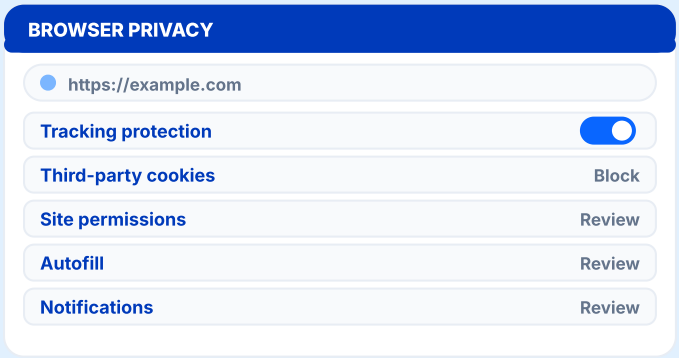

Browsing history
Record of visited pages.

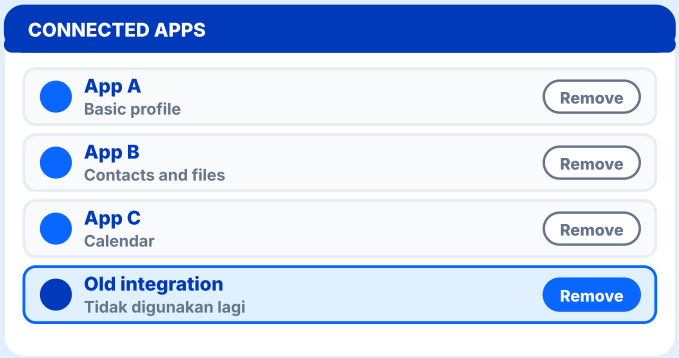

IMPORTANT

Clearing browsing history does not automatically remove every cookie, cached file or copy of data held by websites.

WHY IT MATTERS

Browsers store information that can affect privacy, tracking and account access.

Data Storage, Sharing & Visibility | Checklist 08 hingga 10

08 8. Check Backup & Cloud Sync PRIVACY

Reviewed

WHAT TO CHECK

- Automatic photo backup.
- File synchronisation.
- Device backups.
- Cloud storage accounts.
- Shared folders and albums.
- Devices included in backup.
- Backup retention and deletion settings where available.

ACTIONS

- **Review what data is being backed up.**
- **Check which account receives the backup.**
- **Review shared folders and shared albums.**
- **Remove access for people who no longer need it.**
- **Secure cloud accounts with MFA.**
- **Ensure important data has a suitable backup strategy.**

Synchronisation
Keeps data consistent across connected devices or services. Deleting a synchronised file may also remove it from other connected locations.

Backup
Intended to provide a separate recovery copy, but actual protection depends on backup design and retention.

IMPORTANT
Backup and synchronisation are not the same thing.

WHY IT MATTERS
Cloud services can store personal information beyond the device itself.

09 9. Review Data Sharing Preferences PRIVACY

Reviewed

WHAT TO CHECK

- Optional diagnostic data.
- Usage analytics.
- Product improvement data.
- Data sharing with partners.
- Personalisation settings.
- Data export and deletion controls.
- Privacy notices and consent choices.

ACTIONS

- **Review privacy and data-sharing preferences.**
- **Disable optional sharing where appropriate.**
- **Check which data is collected and why.**
- **Review available data export or deletion options.**
- **Understand the difference between required service processing and optional data sharing.**

IMPORTANT
Some data processing is necessary to provide a service, maintain security or meet legal obligations. Not every data-sharing control can be disabled.

WHY IT MATTERS
Understanding data-sharing choices helps users make informed decisions about how their information is processed.

10 10. Review Account Activity & Devices SECURITY

Reviewed

WHAT TO CHECK

- Recent login activity.
- Active sessions.
- Devices currently signed in.
- Unrecognised devices.
- Third-party access.
- Login alerts.
- Security notifications.

ACTIONS

- **Review recent sign-ins.**
- **Sign out devices you no longer recognise or use.**
- **Revoke suspicious or unnecessary sessions.**
- **Enable available login and security alerts.**
- **Investigate unfamiliar activity.**
- **Change passwords if compromise is suspected.**

IMPORTANT
Location or device information shown in login history may be approximate or affected by network routing, VPNs and mobile networks.

WHY IT MATTERS
Reviewing account activity helps identify access that may not have been authorised.

Your 10-Point Privacy Audit

Tanda setiap item selepas disemak.

- [ ] 01 Review app permissions.
- [ ] 02 Review location access.
- [ ] 03 Check ad personalisation.
- [ ] 04 Secure account recovery.
- [ ] 05 Review public profile visibility.
- [ ] 06 Remove unnecessary connected apps.
- [ ] 07 Review browser privacy settings.
- [ ] 08 Check backup and cloud sync.
- [ ] 09 Review data-sharing preferences.
- [ ] 10 Review account activity and devices.

CHECKLIST PROGRESS **0/10 REVIEWED**

Start With These First

1. Secure your primary email account.
2. Remove unnecessary app permissions.
3. Review location access.
4. Check connected applications.
5. Review account recovery and active sessions.

RECURRING REVIEW

Semak semula privacy settings setiap beberapa bulan, atau apabila memasang aplikasi baharu, menukar device atau menerima security alert.

> **Privacy bukan bermaksud kita perlu berhenti menggunakan teknologi. Ia bermaksud kita lebih faham dan mengawal apa yang kita kongsi.**

Kita tak perlu jadi cybersecurity expert untuk mula menjaga privacy.

MAIN TAKEAWAY

Save checklist ini dan semak satu per satu.

Checklist ini membantu mengurus privacy dan bukan jaminan privasi lengkap.
